

Bracelet Size Guide

To help you choosing your CHIMENTO bracelets, we have created this short guide that enables you to determine your size in just a few minutes.

Please print this page and, using a ruler, verify that our templates are in an exact correct unit of measurement. Therefore, please make sure that the box "Adapt to format" is not ticked before you print.

MEASURE USING OUR BRACELET SIZES

The various sizes of CHIMENTO bracelets correspond to the wrist's circumference measured in centimeters. You can use the table below to determine the right size either directly by size, or wrist circumference measured in centimeters or inches.

CHIMENTO SIZE	WRIST MEASUREMENTS	
18	6.3 - 6.7"	16 - 17 cm
19	6.7 - 7.1"	17 - 18 cm
20	7.1 - 7.5"	18 - 19 cm
21	7.5 - 7.9"	19 - 20 cm

MEASURE USING THE PRINTABLE RULER

Alternatively, you can determine the right size of your CHIMENTO bracelets measuring your wrist's circumference using a printable size measurement ruler.

- Carefully cut out the ruler along its circumference, and puncture it vertically along the black line next to the scissors symbol.
- Wrap the ruler around your wrist making sure that you insert the tip in the hole you have just created so that the numbers become visible.
- Pull the tip of the ruler to tighten it around your wrist. For best results, the ruler should be wrapped around your wrist as closely as possible.
- The number that will appear outside the hole corresponds to your wrist size in centimeters. Using the conversion table above, you will be able to find the right size of your CHIMENTO bracelet.
